**A Weekly Influenza Surveillance Report Prepared by the Influenza Division**

**Weekly Influenza Activity Estimates Reported by State and Territorial Epidemiologists\***

**Week Ending Nov 09, 2019 - Week 45**

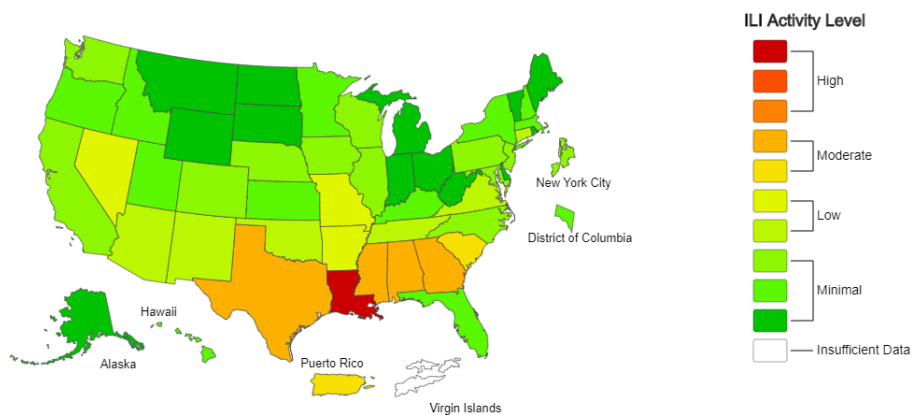

\*This map indicates geographic spread and does not measure the severity of influenza activity.

**A Weekly Influenza Surveillance Report Prepared by the Influenza Division**

**Influenza-Like Illness (ILI) Activity Level Indicator Determined by Data Reported to ILINet**

**2019-20 Influenza Season Week 45 ending Nov 09, 2019**

\*This map uses the proportion of outpatient visits to healthcare providers for influenza-like illness to measure the ILI activity level within a state. It does not, however, measure the extent of geographic spread of flu within a state. Therefore, outbreaks occurring in a single city could cause the state to display high activity levels.

\*Data collected in ILINet may disproportionately represent certain populations within a state, and therefore may not accurately depict the full picture of influenza activity for the whole state.

\*Data displayed in this map are based on data collected in ILINet, whereas the State and Territorial flu activity map are based on reports from state and territorial epidemiologists. The data presented in this map is preliminary and may change as more data is received.

\*Differences in the data presented by CDC and state health departments likely represent differing levels of data completeness with data presented by the state likely being the more complete.

\*For the data download you can use Activity Level for the number and Activity Level Label for the text description.
